Lawrence Berkeley National Laboratory
Berkeley, CA 94720
This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1827
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1707

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1568
                                                                                                                                                                                                                                                                                                    Original source text: Human fibroblasts cDNA clone pHUGF and placenta cDNA clones pHUGF13 and pHUGF15.

Draft entry and copy of computer-readable sequence of [1] kindly provided by R.D.Miller, 08-MAY-1987.

Four potential N-linked glycosylation sites are located at bases 543-551, 840-848, 1284-1292 and 1917-1925. Potential poly-A signals were found 25 and 48 bp upstream of the poly-A site at nucleotides 2139-2144 and 2162-2167 respectively.

Two types of mRNA exit due to alternative splicing. The short form, lacking bases 939-1091 below, encodes a protein lacking beta-glucuronidase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Oshima,A., Kyle,J.W., Miller,R.D., Hoffmann,J.W., Powell,P.P., Grubb,J.H., Sly,W.S., Tropak,M., Guise,K.S. and Gravel,R.A. Cloning, sequencing, and expression of cDNA for human beta-glucuronidase

                                                                                                                                                                                                                                                                                           99US-00270957.
```

The present sequence encodes a microbial beta-glucuronidase (GUS) protein. GUS genes were obtained from six different genera:
Enterobacter/Salmonella, Pseudomonas, Salmonella, Staphylococcus and Thermotoga. Microbial GUS can be used as a reporter/effector molecule for transgenic constructions and in in vitro diagnostic applications. It may also be used to generate sentinel plants that serve as bioindicators of

It may be used to generate transgenic insects for tracking insect populations or to facilitate the development of a bloassay for compounds that affect molecules critical for insect development (e.g. juvenile hormone). Secreted GUS may also serve as a marker for beneficial fungi destined for release into the environment. In animal systems, secreted GUS may be used to achieve extracellular detoxification of glucuronides (e.g. toxin glucuronide) and to examine conjugation patterns of glucuronides. Microbial GUS may also be used in traditional medical diagnostic assays, for drug testing, pharmacokinetic studies, bioavailability studies, diagnosis of diseases and syndromes, following progression of disease or its response to therapy. Microbial GUS has increased thermal stability, high turnover number and enzymatic activity. It is highly specific for the substrate and water soluble, and the substrates are stable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1689

                                                                                                                                                                               The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and method of producing a crop plant CC such as maize or soybean. The method of producing a transformed plant CC taving an improved property comprises transformed plant with the CC encombinant DNA construct and growing the transformed plant with the CC polynuclectide or polypeptide is useful for improving plant with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or CC phosphorus use and/or uptake, by modification of photosynthesis or by cc condition, improved lignin production or improved galactomannan CC providing improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polymucleotide used in the scope of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html.

New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.

Claim 1; Page; 190pp; English

disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                 mucolipidosis, cystinosis, Batten's disease, prosaposin, or infantil neuronal ceroid lipofiscinosis. The invention is also useful in gene therapy. The present sequence is DNA encoding Leishmania mexicana secreted acid phosphatase (SAP) signal peptide, human mature beta-Gt (glucoronidase), linker and IGF-II chimeric protein. This sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                WPI;
                                                                 Sequence
                                                                                                                                        The invention relates to targetted therapeutic comprising a therapeutic agent that is active in a mammalian lysosome, and a means for binding an extracellular domain of human cation-independent mannose-6-phosphate receptor in a mannose-6-phosphate independent manner. The invention is useful for treating metabolic diseases such as lysosomal storage disease, e.g. Gaucher's disease, Pompe's disease, Hurler's syndrome, Niemann-pick's disease, mannosidosis, fucosidosis, Schindler's disease,
                                                                                                                                                                                                                   Example 1; Fig 3; 68pp; English
                                                                                                                                                                                                                                       receptor, useful storage disease.
                                                                                                                                                                                                                                              New targeted therapeutic that is active in a mammalian lysosome binds extracellular domain of human cation-independent mannose-6-phosphate receptor, useful for treating metabolic diseases such as lysosomal

protein cDNA

SEQ ij NO:5

```
CC (GT) which comprised: (a) a therapeutic agent that is therapeutically active in human lysosome; and (b) a lysosomal targeting domain that binds an extracellular domain of human cation-independent mannose-6-phosphate creceptor (CM) and (i) does not bind a mutein in which amino acid 1572 of CM is changed from isoleucine to threonine; and (ii) binds the mutein CC with dissociation constant at least ten times the dissociation constant constant for binding CM. Also described: (1) an underglycosylated therapeutic constant constant in the binds to an extracellular domain and a subcellular compartment where of a cell, and upon internalisation of the receptor on an exterior surface of a cell, and upon internalisation of the receptor, compartment where the therapeutic domain to a subcellular compartment where the therapeutic domain is therapeutically active; and compartment where the therapeutic domain is therapeutically active; and constant of the patient. GT can be used for treating a lysosomal storage disease patient by administering FP con the patient. GT can be used for treating a patient by identifying a cative partient of the patient of the rapeutic agent that is considered that binds CM in a mannose-6-phosphate independent that is considered the patient, where the targeting moiety that binds of the patient, where the targeting moiety is identified by screening a nucleic acid or peptide library. GT is useful for treating constanting and constanting and constanting moiety is defects such as Pompe disease, Tay-Sachs disease, Sandhoff disease, Fabry disease, Gaucher disease, Batten disease, infantile neuronal ceroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              underglycosylated therapeutic fusion protein; nephrotropic; enzyme replacement therapy; cell therapy; gene therapy; lyosomal storage disease; metabolic disease; enzyme defect; Pompe disease; Tay-Sachs disease; Sandhoff disease; Fabry disease; Gaucher disease; Krabbe disease; Wolman disease; Hurler syndrome; Hunter syndrome; Schindler disease; infantile sialic acid storage disease; Batten disease; infantile neuronal ceroid lipofuscinosis; Ehlers-Danlos syndrome type congenital glycosylation disorder; fusion protein; gene; ss.

The invention relates to a targetted therapeutic which comprises a therapeutic agent that is active in a mammalian lysosome and means for binding an extracellular domain of human cation-independent mannose-6 phosphate receptor in a mannose-6 phosphate-independent manner. The targetted therapeutic, therapeutic fusion protein and methods of the invention are useful for treating lysosome storage diseases. The invention is also useful in gene therapy. The present sequence is a fusion DNA used in the exemplification of the invention. This DNA encod a fusion protein which comprises a signal peptide sequence, a human mature beta-glucoronidase (GUS) sequence, a bridge of three amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    misc

                                                                                                                                                                                                                         The present invention relates to recombinant adeno-associated virus (AAV) expression vectors and virions, which include genes coding for enzymes defective or missing in lysosomal storage disease (LSD). AAV is useful in the manufacture of a medicament for treating lysosomal storage disease e.g., mucopolysaccharidoses VII (MPS VII). MPS VII (Sly Syndrome) is due to the deficiency in the lysosomal enzyme beta-glucuronidase (GUS) which aids in the breakdown of glycosaminoglycans (GAGs). AAV is used in gene therapy. The present sequence is human GUS DNA. This sequence is used in

```
subject. the method comprises determining, in a sample from the subject, CC the level of at least one polypeptide, where a higher level of the CC polypeptide compared to the level of the polypeptide in a subject free of CC cancer is indicative of cancer. The polypeptide is selected from any of CC the polypeptides encoded by the polynucleotides listed in the CC specification and polypeptides which are at least 70% homologous to the CC polypeptides. The method of the invention has cytostatic activity, and CC may have a use in gene therapy. The method is useful in identifying CC markers specific for one or several types of cancer, depending on the CC interventions as well as cancer type-specific targets for therapeutic CC applications as well as cancer type-specific targets for therapeutic CC intervention. The compounds that modulate the activity of a tumour CC drugs. The present sequence represents a polynucleotide of the invention XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 492;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The invention relates to a method of predicting clinical outcome is patient diagnosed with cancer by determining the expression level or more genes, or their expression products, selected from p53BP2, cathepsin B, cathepsin L, Ki67/MiB1, and thymidine kinase in a car tissue obtained from the patient, normalized against control generates the patient of the patient

The methods are useful for predicting clinical outcome for a patient diagnosed with cancer, classifying cancer, and predicting the likelihood of long-term survival of a breast cancer and predicting the clines with invasive breast cancer or with estrogen receptor (ER)-positive invasive breast cancer. This sequence corresponds to a gene sequence whose expression is detected by the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2191 BP; 497 A; 589 C; 630 G; 475 T; 0 U; 0 Other;
